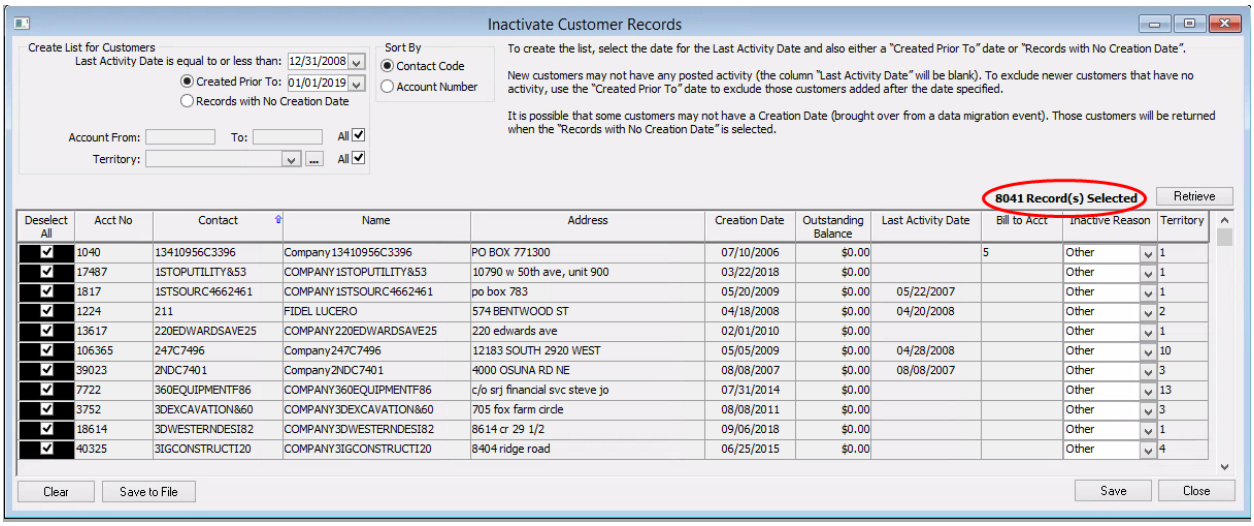
Customer Record Clean Up

This document outlines some suggested ways to go about cleaning up your Customer records in EQUIP.

- Note: Prior to merging EQUIP customer records, you will want to coordinate with any Strategic Solution Providers (CustomerTRAX, Foresight, Sedona) so that they can merge data in their applications to keep all data in sync.
- Note: Merging or deleting EQUIP customer records may have impact to Service Delivery, Service Admin Portal (SVAP), and JDParts. Please consider this prior to starting the merge/delete customer record project.
    - Service Delivery – you must first update any In Progress Work Orders with the new (surviving) Customer Number prior to doing the Customer Merge in EQUIP.
- Contact JDIS Support for any questions.

1. **Inactivate Customer Records** program – this program can be used to "Inactivate" customers for which you haven't done business with since XX years. This way you can mark these customers as Inactive and they can be excluded from the customers you link to Registry. Additionally, these customers won't show in the Smart Searches in the invoicing and crediting programs.



Deselect All	Acct No	Contact	Name	Address	Creation Date	Outstanding Balance	Last Activity Date	Bill to Acct	Inactive Reason	Territory
☑	1040	13410956C3396	Company13410956C3396	PO BOX 771300	07/10/2006	$0.00		5	Other	1

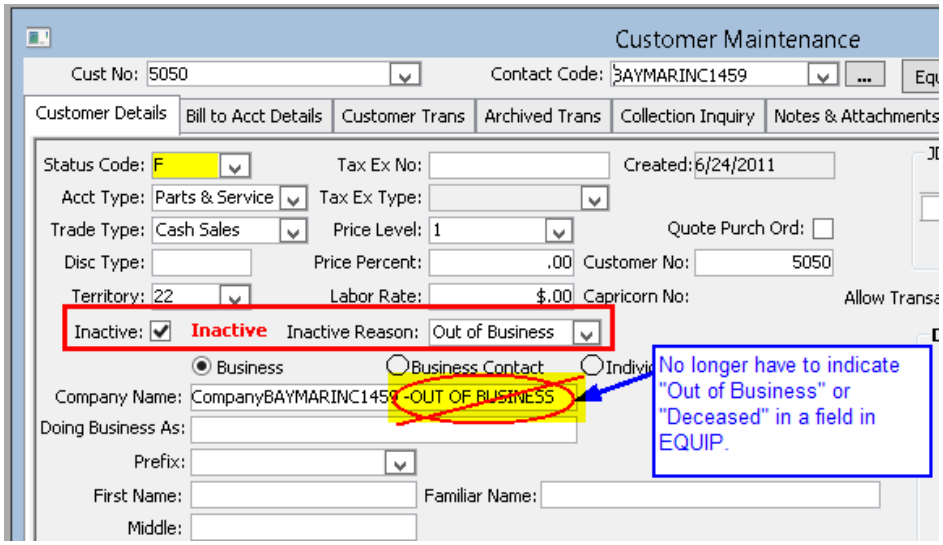
- By using this program to Inactivate the Customer record and giving an “Inactive Reason”, the data previously stored in another field on the Contact or AR Customer, can be cleaned up:



2. **Locate Duplicate Contacts** – this program can be used to find potential duplicate Contacts.

The system check for duplicate records will be limited to the following fields:

Phone Number (Business Phone, Mob Phone, or Prv Phone)
If Phone Number is selected, comparison is done on Business, Mobile, and Private phone numbers.

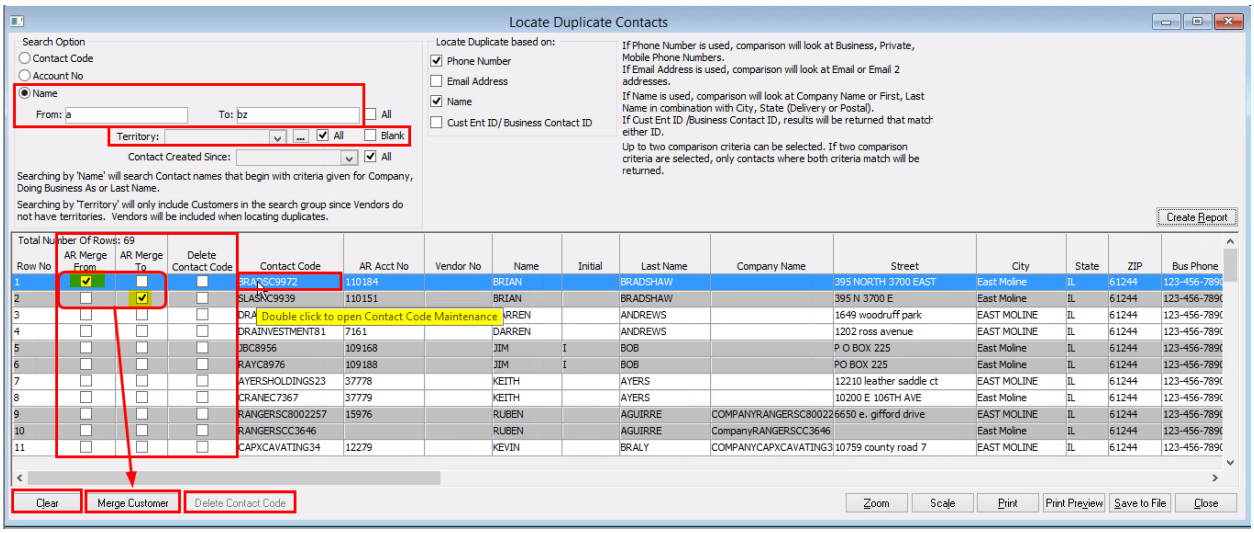
Email address (Email Address or Email Address 2)
If Email address is selected, comparison is done on Email and Email 2 addresses

Name (Company Name or First and Last Name)
If Name is selected, comparison is done on Company Name or First/Last Name in combination with City and State (Delivery or Postal)

Cust Ent ID/Business Contact ID
If Customer Entity ID/Business Contact ID is selected, comparison is done on either ID.
To narrow the list of duplicates further, users can enter a date in the new **Created Since** field. This will limit the duplicates to customer records created since that date.

A combination of two of the above can be selected for comparison in locating potential duplicates.

In the below example, we searched by **Name** From: "a" To: "bz". Contacts with either Last Name, Company Name or Doing Business As name beginning in the range starting with "a" to "bz" were searched looking for duplicates based on "Locate Duplicates based on:" Phone Number and Name.

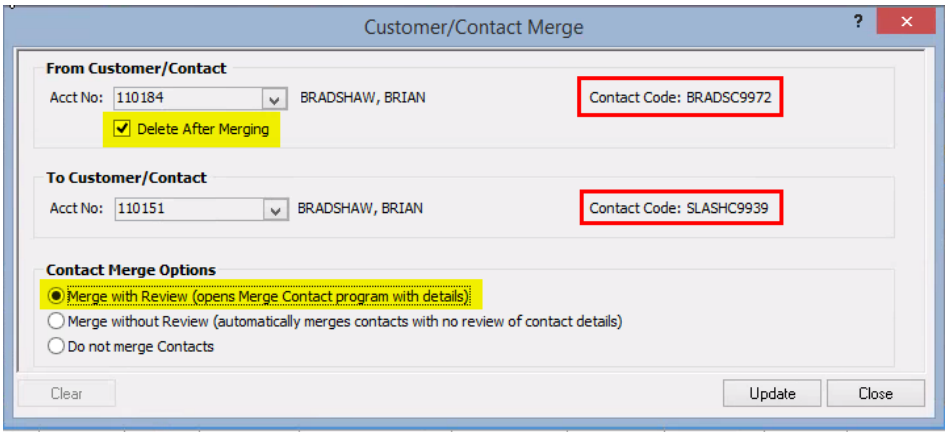


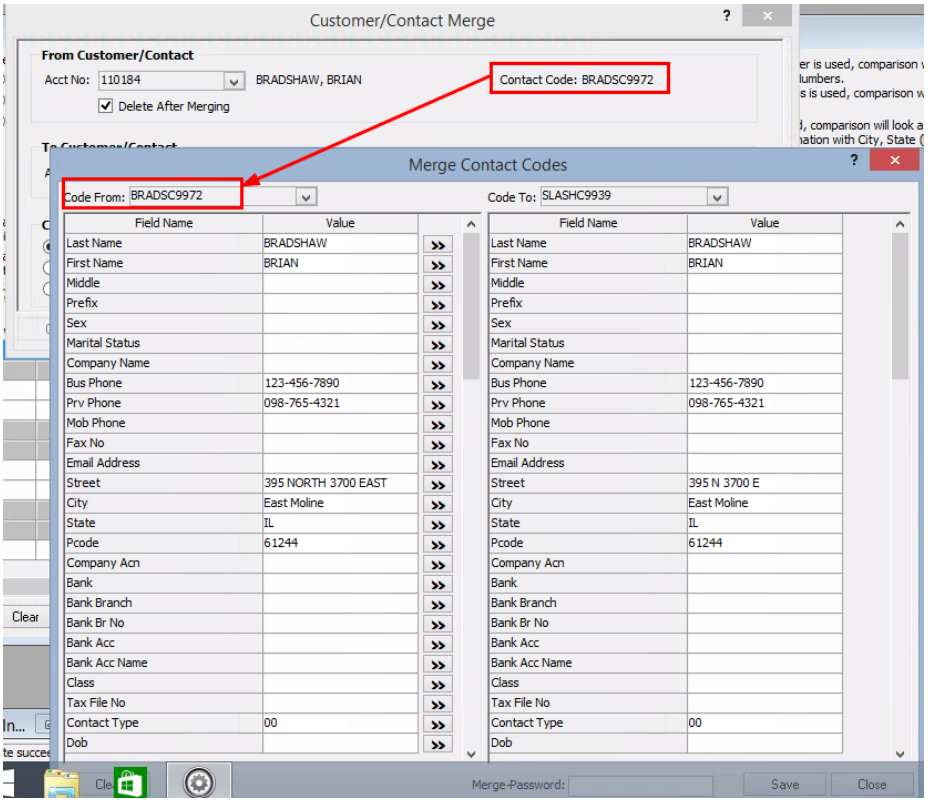
3. **Merge Duplicate Customers and associated Contact Codes**.

Once duplicate contacts/customers have been identified and you can first merge the two customers and then merge the Contacts through the Customer/Contact Merge program.

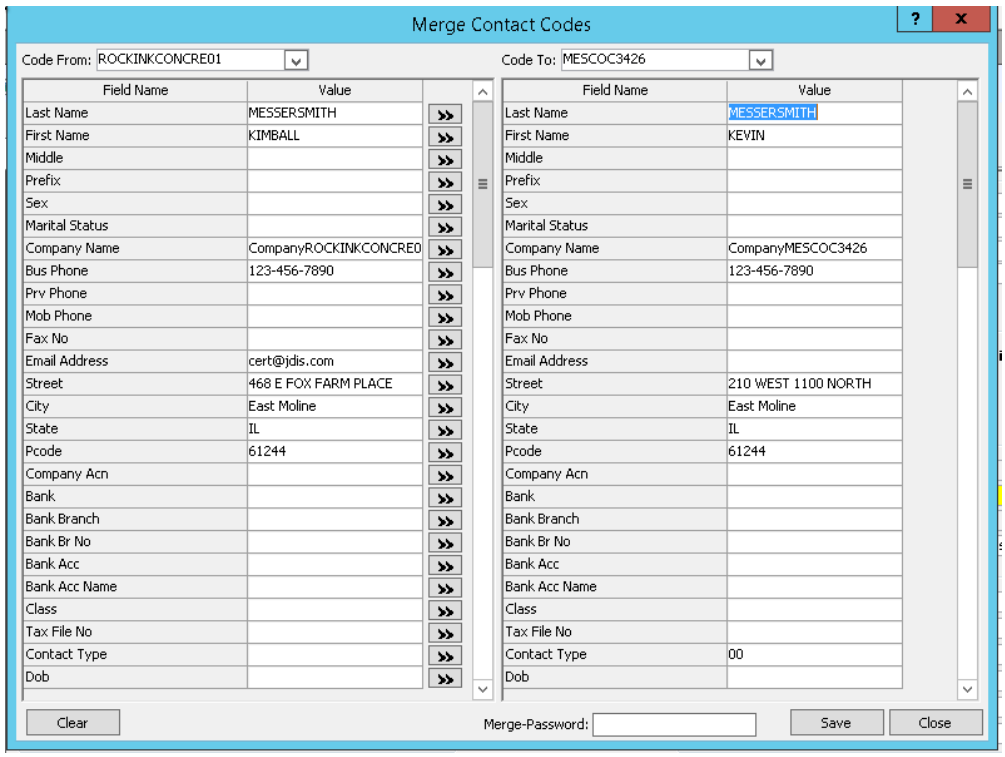
- It is recommended that the **Customer/Contact Merge** is performed during off hours, due to the large amount of tables that are being updated.

The **Customer/Contact Merge** program will update all of the transactions in EQUIP for the "From Customer" with the Acct No of the "To Cust". Make sure you check the checkbox "Delete After Merging" to delete the duplicate customer. This will also allow for the newly added functionality to launch the Merge Contact Codes program directly from here.





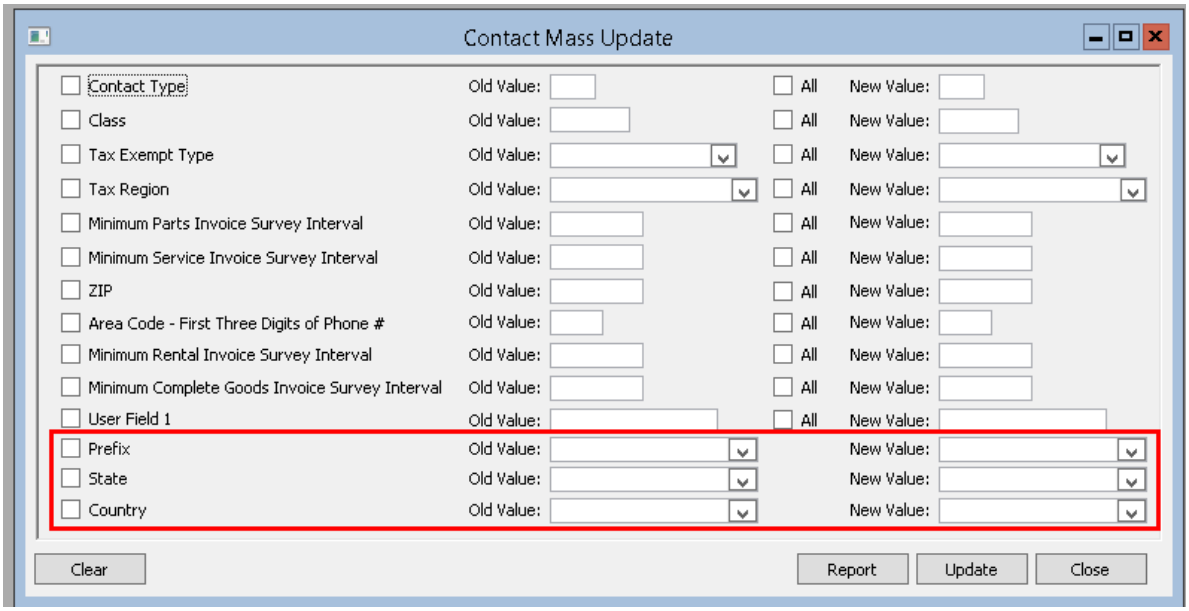
Contacts can also be merged through the “Merge Contacts” button in **Contact Maintenance**. This will take you to the **Merge Contact Codes** program:



It is recommended that you merge the duplicate Contact Codes so that all of the transactional data in EQUIP will be updated with the surviving Contact Code.

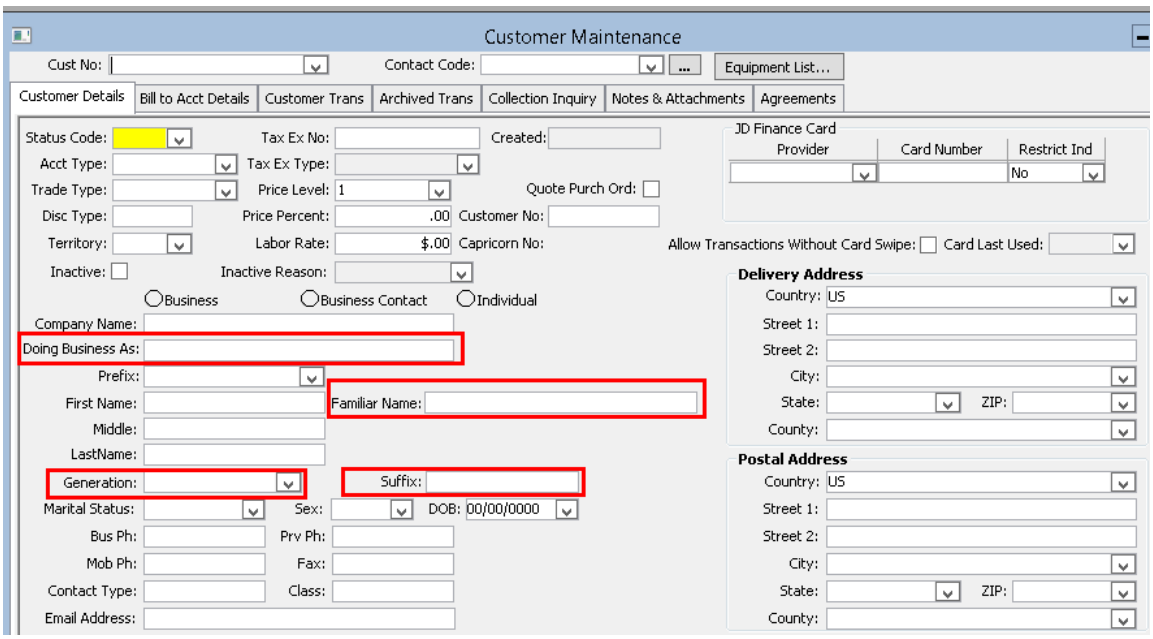
If you try to delete the Contact Code associated with the Customer Acct No that you merged, you may not be able to do so, due to existing transactions in certain tables in EQUIP.

4. **Contact Mass Update** program – “Prefix”, “State” and “Country” have been added to this program to help dealers convert existing data to valid Code Types for these fields.



The “Old Value” dropdowns for “Prefix”, “State” and “Country” will populate with existing data that does not comply with the new available data values. For example, in “State” you might find “Illinois” for “Old Value”. It needs to be changed because now the acceptable value is “IL”. The system will replace all “Illinois” States with “IL” in the CONTACT database. As the “Old Value” list is converted to the New Values, the list will diminish. Once the “Old Value” has no more entries, you know you have converted all of your old data to the new acceptable data. This will ensure that in EQUIP, you have the acceptable data for Prefix, State and Country as defined by Registry.

5. **New fields in Contact and Customer Maintenance** – These new fields were added in Contact and Customer Maintenance to align with the fields available in Registry.
   Customer data that was previously stored in other fields can now be stored in the correct field, enabling cleaner customer data for tight-matching to the Registry customer.
   a. **Doing Business As**
   b. **Familiar Name**
   c. **Generation**
   d. **Suffix**



- ❖ It may be helpful to download your Contact Code data to Excel to search for data that is in the incorrect fields.

Customer Linkage Contact Data Extract

When the dealer is ready to download Contacts for the Customer Linkage Tool, they can use the EQUIP utility: **Customer Linkage Contact Data Extract**.

Please refer to the *EQUIP™* Online Help site for details of functionality of this program. Below are a few highlights.

Selection Criteria:

- Searching by "Name" will search Contact names that begin with the criteria specified for Company, Doing Business As, or Last Name.

- **Top xxxx Customers Based on Sales** filter to return Contacts based on sales.

Customer Linkage Contact Data Extract

Selection Criteria

Selection By
- ○ Contact Code
- ○ Account No
- ◉ Name

From: Smith To: Smith All: ☐

Contact Created Since Date: 00/00/00 All: ☑

Territory: All: ☑

Top Customers Based on Sales ☑ Equipment/Rental Sales ☑ Parts/ Service Sales

Start Date: 06/11/2018 End Date: 06/11/2019 Sales do not include Agreement Sales

Include only Contacts with associated AR Customer No? ☐

Exclude Inactive Contacts ☑

Exclude Business Contact Name for Businesses with Contacts? ☐

Searching by "Name" will search Contact names that begin with the criteria given for Company, Doing Business As or Last Name.

If you wish to link your "Business with Contact" Contacts directly to the Business in Registry, check the "Exclude Business Contact Name for Businesses with Contacts" checkbox. This will remove the contact's name (Prefix, First Name, Familiar Name, Middle Name, Last Name, Generation, Suffix) in the results returned.

Only Contacts that have not been linked to Registry will be returned in this extract.
